3m x 6m Printed Marquee

Artwork Guidelines

Art Area

Safe Area (visible image)

Seam

Art Area vs Safe Area - colours or images which go up to the edge of the sheet should go right to the edge of the "Art Area"... although please understand that art outside of the "Safe Area" is likely to disappear into the stitching. Keep all logos, text and essential artwork well inside the safe area. No extra 'bleed' is required outside the Art Area.

Seam - art can be run over the stitch seam with no issue just be aware that the seam appears as a dark line and will show through the middle of any image

Front Wall - This is rarely ordered as it obstructs entry/exit to the tent. It is included in the artwork template for the rare occasion it is required

- Supply each 'sheet' or 'side' as a separate file. Please name each file according to labels shown (eg wall-back-outer.pdf)
- Artwork can be supplied at either 100% size or 50% size or 25% size. Templates on this sheet are at 10% final size (therefore to use for 50% scale artwork enlarge this 10th scale art by 500%).
- Pixel resolution should be between 100ppi and 150ppi at final size (eg images placed in 25% scale artwork should be at least 400ppi so that they work out at 100ppi when enlarged). Images below these resolution can be printed but expect a more 'jaggy' or pixelated appearance.
- Files should be supplied as PDF, Illustrator (.ai) or EPS.
- Font size - Ideally fonts sizes used should be above 30pt.
- Ideally all text should be converted to outlines.
- Tents are printed CMYK dye sublimation, Pantone colours in supplied artwork will be converted
- Template ratio of this page: 1:10 (when at true size 2m wide)
